A Premium Quality Product Designed for
Australian Conditions by Australian Paint Professionals.

ENVIROCOOL, the ultimate heat reducer for your home.

UP TO 30% COOLER

ENVIROCOOL is a 100% ACRYLIC roof and wall coating system that reduces surface temperature and keeps buildings cool by reflecting UV sunlight.

DELUXE PAINTS ARE MADE IN WA AND HAVE BEEN DESIGNED FOR AUSTRALIAN CONDITIONS.

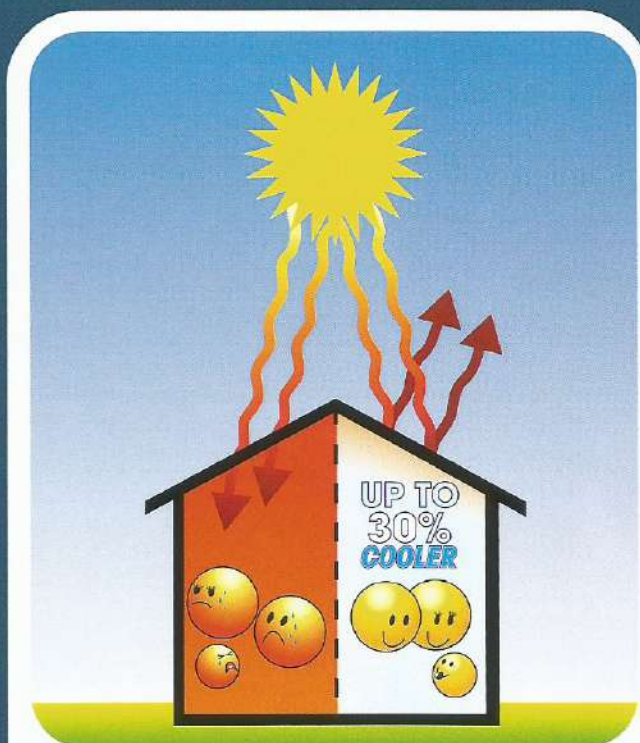

Manufactured here in W.A. in a range of colours using tough Acrylic resins, **ENVIROCOOL** provides a durable, flexible waterproof membrane that protects your building, with the added benefit of saving you money by reducing the internal temperature by up to 30%.

Environmentally friendly **ENVIROCOOL** can be applied to concrete, terracotta, metal, brick or timber roofs and walls. Enhance and protect your building, plus save money on energy costs by using **ENVIROCOOL Heat Reducer**.

Additional uses for **ENVIROCOOL**...

Patio & Shed Roofs
Caravan Roofs
Horse Floats

Refrigerated Trucks
Sea Containers
Asbestos Roofs

Independent scientific tests have been undertaken in the North West of W.A. The results show that the temperature under an Envirocool coated panel dropped from 51.3°C down to 38.4°C at 12.30pm. Imagine what it can do for your home!

ENVIROCOOL
Heat Reducer

Deluxe Roof Coatings have been specifically designed to meet all the necessary requirements for the roof repair processes and applications to ensure absolute quality and a product that will last in the tough Australian climate. Designed for Australian conditions.

How your roof is restored to it's former glory.

Professional Inspection.

A roof inspection is carried out to find and report on all faults with your roof. The most common faults are cracked and loose tiles, bedding material that has cracked and become loose or is missing and an accumulation of moss.

Repair or Replaced.

Roof tiles that are cracked and broken will be replaced with the same style as your existing tiles. Any valley damage will also be repaired or replaced.

Pressure Clean.

High pressure cleaning is then carried out. This gets rid of all the built up grime and any moss that may have grown on your roof.

Rebed & Repointing.

Any loose, cracked and broken bedding under the ridge capping is removed. The ridge capping is then repointed with our acrylic Flexi-ridge pointing mix.

Sterilisation.

If your roof was covered with moss or lichen then the freshly cleaned tiles will be sterilised to destroy any spores that may be remaining before the roof is re-coated.

Priming and Sealing.

Now the roof is ready to be primed and sealed with the Deluxe 100% acrylic sealer/primer.

Membrane Application.

Finally, two coats of Deluxe roof coating, with Aquabead, is applied to the roof, ensuring maximum protection, durability and weather proofing.
